Sequence 66, Application US/09220132

Patent No. 6506607

GENERAL INFORMATION:
APPLICANT: Shyjan, Andrew W.
TITLE OF INVENTION: METHODS AND COMPOSITONS FOR THE IDENTIFICATION AND ASSESSMENT
TITLE OF INVENTION: OF PROSTATE CANCER THERAPIES AND THE DIAGNOSIS OF PROSTATE CANCE
FILE REFERENCE: 07334-074001

CURRENT APPLICATION NUMBER: US/09/220,132

CURRENT FILING DATE: 1998-12-23

PRIOR FILING DATE: 1998-03-25

PRIOR FILING DATE: 1998-03-25

PRIOR FILING DATE: 1997-12-24

NUMBER: OF SEQ ID NOS: 191

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 66

LENGTH: 2736

TYPE: DNA
ORGANISM: Homo sapiens

/note="Vector: pT773D-Pac (Pharmacia) with a modified
polylinker; Site 1: Not I; Site 2: Eco RI; Plasmid DNA
from the normalized library NCI_CGAP GC4 was prepared, and
s circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subbractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
1257996-1258631, 14699064-1470993, and 1475592-1476743).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

/note="Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site\_1: Not IT, Site\_2: Eco RI; 1st strand was prepared from human tonsillar cells enriched for germinal center B cells by flow sorting (CD20+, IgD-),

CDNA

/tissue\_type="germinal center B cell"
/lab\_host="DH10B"

provided by Dr. Louis M. Staudt (NCI), Dr. David Allman (NCI) and Dr. Gerald Marti (CBER). cDNA synthesis was primed with a Not I - oligo(dT) primer

(Pharmacia), digested with Not I and cloned into tand Eco RI sites of the modified py73 vector. Lib went through one round of normalization, and was constructed by Bento Scares and M. Fatima Bonaldo.  0.435   Length: 278   278   82.00   Matches: 0   150.00%   Matches: 0   100.00%   Matches: 0   10	FEATURES FEATURES FEATURES	JOURNAL UN COMMENT Em Ti Ph	MARREFERENCE 1 AUTHORS NC TITLE NA	S ON CON	82 SULT 10 .766034 AP	US-09-976-740- Qy 1	Alignment Scores: Pred. a modified polylinker; Site 1: Not I; Site 2: Eco RI;
Equal amounts of plasmid DNA from five normalized
libraries were mixed, and ss circles were made in vitro.
Following HAP purification, this DNA was used as tracer in
a subtractive hybridization reaction. The driver was
PCR-amplified cDNAs from pools of 5,000 clones made from
the same 5 libraries. The pools consisted of the following
libraries and cloneIDs: Soares NbHSF pool 1:
30384-310919, 333208-325895 Soares NbHSP pool 1:

Widespread domai in signalling and nuclear proteins. In EPH-related tyrosine kinases, appears to mediate cell-cell initiated signal transduction via the binding of SH2-containing proteins to a conserved tyrosine that is phosphorylated. In many cases mediates homodimerisation"

Consortium/LLNL at: http://image.llnl.gr
Series: IRAL Plate: 15 Row: m Column: 17
This clone was selected for full length sequencing because it passed the following selection criteria: Hexamer frequency ORF analysis, GenomeScan gene prediction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cDNA Library Preparation: Rubin Laboratory

/note="SAM; Region: Sterile alpha motif. Widespread domain in signalling and nuclear proteins. In EPH-related in signalling and nuclear proteins. In EPH-related cyrosine kinases, appears to mediate cell-cell initiated signal transduction via the binding of SH2-containing proteins to a conserved tyrosine that is phosphorylated. In many cases mediates homodimerisation"

LBPs are capable of binding to native and methylated low density lipoproteins (LDLs). Isolated polynucleotides encoding novel LBPs and their fragments are claimed, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are also claimed, as are pharmaceutical compositions comprising an LBP polypeptide or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This cDNA clone codes for novel human low density lipoprotein (LDL) binding protein LBP-2 (see AAW49041). It was isolated by screening human liver, aorta and foetal brain cDNA libraries with rabbit LBP-2 cDNA. cDNA clones (see AAV4834-39) and encoded rabbit and human LBPs (see AAW49037-42) are claimed. An abnormality in LBP metabolism or structure is diagnostic of a risk for atherosclerosis. The invention provides: methods for determining if an animal is at risk for atherosclerosis (e.g. for prenatal screening); methods for treating atherosclerosis (including gene therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent formation of atherosclerotic plaque; and methods for treating a cell having an abnormality in LBP structure or metabolism. Pharmaceutical and vaccine compositions are also provided, as well as recombinant vectors and host cells used to produce recombinant LBP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid encoding low density lipoprotein binding proteins and related vectors - transformed cells, proteins, and modulators of binding, useful for treatment and diagnosis of atherosclerosis and for identifying

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present sequence is that of a partial cDNA encoding novel human low CC density lipoprotein binding protein 2 (LBP-2, see AAB82803). Clones were CC isolated from human foetal brain, liver and actae CDNA libraries using CC rabbit LBP-2 cDNA as probe. A full-length cDNA clone is given in CC AAH26499, and a genomic DNA sequence is given in AAH26495. LBP-2 nucleic CC acids are among claimed polymucleotides of the invention that encode covel polypeptides capable of binding to native and methylated LDL. Also CC claimed are isolated LBP polypeptides, and biologically active fragments CC and analogues of them, as well as expression vectors, cells and methods CC of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating CC atherosclerosis, and methods for treating a cell having an abnormality in Structure or metabolism of LBP are claimed. Pharmaceutical compositions, CC care also claimed
Human; breast cancer; ovarian cancer; cytostatic; immunosuppressive; nootropic; neurpprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; immune disorder; antibacterial; antifungal; antiparasitic; cardiant; immune disorder; antiommune disorder; autoimmune thyroiditis; diabetes mellitus; Crohn's disease; multiple sclerosis; rheumatoid arthritis; ulcerative colitis; cardiovascular disorder; wound healing; neurological disease; ds.

                                                                                                                                                                                                                                                                                                                                invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antivical; antiallergic; hepatotropic; antibacteric; antiinflammatory; antivicer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly breast and ovarian cancer. The nucleic acid sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis, neurological diseases such as cerebral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist
                                                                                                                                                                                                                                                                                          Sequence 1336
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatmen and diagnosis of cancer, immune disorders, cardiovascular disorders and

The gene was isolated from a genomic DNA clibrary using LBP-2 cDNA as probe. The LBP-2 protein predicted from the present sequence differs from that predicted from a cDNA clone (see CC AAB82803) in that it contains an additional 321 amino acids are among claims (the cDNA is a 5' truncation). LBP-2 mucleic acids are among claimed polymuclectides of the invention that encode novel polypeptides capable of binding to native and methylated LDL. Also claimed are contained LBP polypeptides, and biologically active fragments and consisted LBP polypeptides, and biologically active fragments and consisted LBP methods for evaluating an agent for use in treating a therosclerosis, methods for evaluating an agent for use in treating comprising an LBP polypeptide or nucleic acid, and vaccine compositions, are also claimed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Low density lipoprotein binding protein 2; LBP-2; LDL; human; atherosclerosis; antiarteriosclerotic; gene therapy; diagnosis; vaccine;

The present sequence is that of genomic DNA encoding novel human low density lipoprotein binding protein 2 (LBP-2, see AAB82806). The DNA was isolated from a human genomic library by screening with LBP-2 cDNA (see AAH26494). The open reading frame spans 5 exons. Human LBP-2 nucleic acids are among claimed polynucleotides of the invention that encode novel polypeptides, termed LBPs, capable of binding to native and methylated LDL. Also claimed are isolated LBP polypeptides, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Methods of expression vectors, cells and methods of producing the LBPs. Methods for catlanting an agent for use in treating atherosclerosis, methods for treating a cell having an abnormality in structure or metabolism of LBP are claimed. Pharmaceutical compositions comprising an LBP polypeptide or metabolism of LBP are claimed. Pharmaceutical compositions comprising an labe.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   exon
                                                                                                                                                                                                                                       New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                    02-MAR-2000; 2000US-00517849.

                                                                                                                            The present sequence is that of a polynucleotide encoding a fragment of novel low density lipoprotein binding proteins (LBPs) of the invention (see AAB82797-820). LBPs are capable of binding to native and methylated low density lipoproteins (LDLs). Isolated polynucleotides encoding novel LBPs and their fragments are claimed, as well as expression vectors, cells and methods of producing the LBPs. Methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP are also claimed, as are pharmaceutical compositions comprising an LBP polypeptide or

                                             The present sequence is that of cDNA encoding a portion (see AAB82799) of CC novel rabbit low density lipoprotein binding protein 2 (LBP-2). The cDNA CC was isolated following screening of a rabbit cDNA library for clones CC encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. A full-length sequence for LBP-2 is given in AAH26500. The CC invention provides claimed polymucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated CC polypeptides, termed LBPs, and biologically active fragments and CC analogues of them, as well as expression vectors, cells and methods of CC producing the LBPs. Also claimed are methods of determining if an animal CC is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an CC compositions comprising an LBP polypeptide or nucleic acid, and vaccine CC compositions, are also claimed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      뭉

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-09-976-740-20 (1-26) x AAH26489
               The present sequence is that of cDNA encoding a portion (see AAB82800) of covel rabbit low density lipoprotein binding protein 3 (LBP-3). The cDNA covel rabbit low density lipoprotein binding protein 3 (LBP-3). The cDNA cover sisolated following screening of a rabbit cDNA library for clones conclude the cover state of the cover state 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Oryctolagus cuniculus.

Rabbit low density lipoprotein binding protein LBP-2 CDNA

(first entry)

Low density lipoprotein binding protein; LDL binding protein 2; receptor; rabbit; atherosclerosis; diagnosis; therapy; vaccine; LBP-2;

Oryctolagus cuniculus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This cDNA clone codes for novel rabbit low density lipoprotein (LDL) CC binding protein LBP-2 (see AAM49038). It was isolated by functional screening of a cDNA library, produced from balloon-deendothelialised CC bealing rabbit abdominal aorta mRNA, for clones encoding LBPs able to bind both native and methyl LDL cDNA clones (see AAV32834-39) and cc encoded rabbit and human LBPs (see AAW49037-42) are claimed. An occ abnormality in an aspect of LBP metabolism or structure is diagnostic of a risk for atherosclerosis. The invention provides: methods for content and in a limit is at risk for atherosclerosis (e.g. for prenatal screening); methods for treating atherosclerosis (including gene therapy) using e.g. LBP polypeptides to bind LDL and thereby prevent formation of atherosclerosclerosic plaque; and methods for treating a cell having an abnormality in LBP structure or metabolism. Pharmaceutical and concine compositions are also provided, as well as recombinant vectors and host cells used to produce recombinant LBP

The cDNA was isolated following screening of a rabbit CDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. A full-length sequence for LBP-2 is given in AAH26500. The invention provides claimed polynucleotides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP. Pharmaceutical
Oryctolagus cuniculus.

DB: 밁 S 밁 Ş US-09-976-740-20 (1-26) The present sequence is that of cDNA encoding novel rabbit low density lipoprotein binding protein 1 (LBP-2, see AAB82807). The cDNA was isolated following screening of a rabbit cDNA library for clones encoding LBPs that bound to both native low density lipoprotein (LDL) and methyl LDL. The invention provides claimed polynuclectides encoding novel polypeptides which are capable of binding to native and methylated LDL, the isolated polypeptides, termed LBPs, and biologically active fragments and analogues of them, as well as expression vectors, cells and methods of producing the LBPs. Also claimed are methods of determining if an animal is at risk for atherosclerosis, methods for evaluating an agent for use in treating atherosclerosis, and methods for treating a cell having an abnormality in structure or metabolism of LBP. Pharmaceutical compositions comprising an LBP polypeptide or nucleic acid, and vaccine WPI; 02-MAR-2000; 14-JUL-2000; Claim New isolated low density lipoprotein binding polypeptide for treating, diagnosing and/or identifying therapeutic agents for atherosclerosis. 28-FEB-2001; 07-SEP-2001 Sequence 2561 BP; 372 A; 937 C; 879 compositions, are also claimed Lees WO200164874-A2 genome Human 13-OCT-2003 US2003073623-A1 Homo sapiens ACH46971 No.: (BOST-) 1320 1260 2001-565505/63 DB; AAB82807. antisense DNA or RNA.

or in generating

The invention relates to an isolated polynucleotide comprising any one of 38043 cDNA sequences, appearing as ACHI-2789-ACH50831, whose sequence was CC determined by the technique of SBH (sequencing by hybridisation). Also CC included is a purified polypeptide comprising a sequence corresponding to CC a reading frame of the novel polynucleotide. The nucleic acid sequences care useful in diagnostics as expressed sequence tags (EST) for clantifying expressed genes or for physical mapping of the human genome, CC in forensics, in assessing biodiversities, or in identifying mutations CC responsible for genetic disorders and other traits. The nucleotide corrections are also useful as hybridisation probes, as oligomers for PCR, CC protein, or in generating antisense NNA or RNA. The purified polypeptide is useful for generating antisense NNA or RNA. The purified polypeptide is one of the 38043 isolated cDNA/EST sequences. Note: The sequence correction of this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence.html?DocID=20030073623

                                                                                                                                                                                                                Total RNA was extracted from Jurkat cells and mRNA was prepd. from it. A CDNA library was prepd. in lambda gtll. A positive clone was isolated and analysed by antibody screening. A mutant coding sequence in which the 3'-terminal sequence was deleted was prepd. and used to prepare a polypeptide in which the C-terminal end is deleted. Epitopes of the CENP-B protein were determined. These peptides can be used to detect antihuman centromere antibodies. The type of diseases of a patient having the antibody can be exactly classified using the polypeptide
